That is funny because all three of the roads run east west (generally) and all of the roads connect with the north south county road on the east side of the property. The drum removal effort will be done on the north road. I just spoke with Richard who spoke with his contact at Crestone and the Crestone contact indicated it was the middle road they were concerned about which will not be part of the drum removal effort. Anyway let me know if you get other information. Jon

Hi Jon,

Crestone referenced a road on the east side of the parcel. They said they would provide us with a map, but haven't yet.

Thanks,

Subject: Crestone discussions

Amelia: Joyce apparently reached out to Dave Folkes (our consultant coordinating drum removal) regarding use of access roads for implementation of the removal effort. Currently there are three roads on the property. One on the north that will be the primary access for implementation of the drum removal. One road in the middle of the property that is used by the O&G firm to access the well pad that is off the Stratus property to the west and one road on the south which is direct access to the on-site well pad. Do you know which road the question is about? Thanks Jon
